

Sulphur Mountain Eco-Village: A Comprehensive Development Plan

1. Executive Summary

The Sulphur Mountain Eco-Village is a visionary regenerative development project located at 11962 Sulphur Mountain Road in the serene Upper Ojai, California. This document outlines a comprehensive plan to transform a 9.47-acre sanctuary into a flagship destination for conscious living. The project integrates sustainable residential housing, diverse agricultural enterprises, world-class retreat lodging, and sacred ceremonial spaces. Our mission is to create a high-impact opportunity that blends significant financial returns with profound ecological and spiritual stewardship, attracting a community of aligned partners, investors, and creatives.

The immediate financial objective is to secure a **\$1.65 million bridge loan**. This funding will be used to refinance the property, complete a strategic partner buyout to consolidate ownership, prevent an impending foreclosure, and inject the initial capital required for the first phase of development. This initial phase includes a **\$200,000 renovation and expansion of the main residence**.

The project is underpinned by a robust financial strategy, with a total phased **rehab budget of over \$3 million**. The property, with a current "As-Is" appraisal of **\$2.3 million**, is projected to achieve an After-Repair Value (ARV) of **over \$6.9 million** upon completion. The development will unfold in carefully planned phases, activating multiple, synergistic revenue streams to ensure financial resilience and a clear path to profitability. Our exit strategy for the initial loan is a refinance within 18-24 months, supported by the increased property value and early revenue generation.

Key development pillars include:

- **The Main Residence Compound:** A luxurious private dwelling and retreat hub.
- **McQueen's Garage:** A 3,200 sq. ft. creative and ceremonial hall.
- **The Guest Lodging Village:** Up to 50 unique, nature-integrated lodging units.
- **Regenerative Agriculture Hub:** A 3-acre farm, advanced mushroom cultivation facilities, a beekeeping apiary, and a holistic livestock program.
- **Community & Creative Infrastructure:** Including core team housing, art workshops, and numerous sacred and wellness spaces.

Innovation is at the heart of our financial model, which includes the development of a **tokenized investment platform** to offer fractionalized ownership and engage a global community of supporters. The project is led by a seasoned team with deep expertise in real

estate, finance, regenerative development, and community activation. This comprehensive plan details our vision, phased execution strategy, diverse revenue models, and risk mitigation measures, presenting a compelling case for a landmark project in one of California's most sought-after locations.

2. Project Overview and Vision

2.1. Vision Statement

The Sulphur Mountain Eco-Village embodies a profound vision of regenerative development, where the principles of conscious living seamlessly intertwine with sustainable practices. Our core objective is to transform the 9.47-acre (or 10-acre, as referenced in some documents) sanctuary into a preeminent eco-village. This transformation will integrate sustainable building methodologies, community-based agricultural systems, world-class retreat lodging, and deeply sacred gathering spaces. The project is meticulously designed to serve as a high-impact opportunity, harmonizing substantial financial returns with an unwavering commitment to ecological and spiritual stewardship. It aims to cultivate a vibrant community by attracting and engaging aligned partners, investors, and creative individuals who share this foundational ethos.

2.2. Project Goals and Deliverables

Our strategic goals for the Sulphur Mountain Eco-Village are multifaceted, focusing on both the physical development of the property and the cultivation of a thriving, sustainable community:

- **Property Address:** The project is situated at 11962 Sulphur Mountain Road, Upper Ojai, CA, a location renowned for its natural beauty and tranquil environment.
- **Holistic Transformation:** Beyond mere construction, our aim is to convert the property into a fully functioning, thriving eco-village. This encompasses the development of integrated residential, agricultural, creative, and ceremonial infrastructure, each designed to complement the others and enhance the overall living experience.
- **Consolidated Ownership:** A critical immediate goal is to secure 100% ownership of the property through a partner buyout. This step is essential for streamlining decision-making, ensuring project continuity, and unlocking the full potential of the development without internal conflicts.
- **Financial Resilience:** We are committed to establishing long-term financial viability through a strategic refinance of existing loans and the cultivation of multiple, high-impact revenue streams. This diversified approach will ensure robust financial health and reduce reliance on any single income source.

- **Community Cultivation:** A cornerstone of the Eco-Village is the fostering of a vibrant, engaged community. This will be achieved through shared experiences, comprehensive educational programs, and collaborative initiatives that encourage participation and mutual growth among residents and visitors.
- **Sustainability Leadership:** We are dedicated to implementing and showcasing leading regenerative practices across all facets of the project. This includes sustainable agriculture, eco-conscious building techniques, and responsible resource management, setting a benchmark for future developments.
- **Value Maximization:** A key financial deliverable is to achieve a projected After-Repair Value (ARV) exceeding \$6.9 million upon full build-out. This represents a significant increase from the current "As-Is" land appraisal of \$2.3 million, reflecting the substantial value creation inherent in our development plan.
- **Phased Execution:** The project will be developed through carefully planned strategic phases. This phased approach allows for efficient capital deployment, adaptive management, and the leveraging of the property's unique zoning and natural resources at each stage of development.

2.3. Strategic Importance

The Sulphur Mountain project stands as a unique and compelling investment proposition, skillfully blending the pursuit of financial returns with a deep commitment to ecological and social stewardship. Its inherent value is significantly amplified by a diversified revenue model, which is strategically designed to facilitate the repayment of the initial investment within an ambitious 18-month timeframe. The property's location and planned offerings uniquely position it to capture a substantial share of the burgeoning market for wellness retreats and eco-tourism. With its unparalleled panoramic views, serene natural landscape, and meticulously designed community spaces, the Eco-Village is set to become a premier destination. Furthermore, the seamless integration of residential, agricultural, and community uses aligns perfectly with the area's distinct zoning regulations, thereby ensuring its long-term viability, desirability, and sustained growth within the region.

3. Property Description and Development Zones

3.1. Property Overview

The Sulphur Mountain Eco-Village is situated on an expansive 9.47-acre (or 10-acre, as indicated in some initial documents) site, strategically located at 11962 Sulphur Mountain Road, Upper Ojai, CA. This unique parcel benefits from Upper Ojai Zoning, a critical advantage that explicitly supports a diverse range of uses including Residential, Agricultural, and Community activities. The property's natural topography and existing

features have led to its intuitive division into three distinct and purposeful sections. This inherent segmentation provides exceptional flexibility, allowing for the creation of specialized zones dedicated to agriculture, various lodging options, vibrant community spaces, and dynamic event areas, each optimized for its intended function while contributing to the holistic vision of the eco-village.

3.2. Property Breakdown by Section

3.2.1. Front Left Section

This approximately 3-acre expanse is characterized by its flat, exceptionally fertile topsoil, making it an ideal foundation for intensive regenerative farming practices. Immediately after the entrance, on the left, the existing gatehouse is slated for a significant renovation, transforming it into a 1,200 sq. ft. operations and administration unit. This facility will serve as one of the two planned Accessory Dwelling Units (ADUs), providing essential on-site support. Further along this side, extensive flat land has been designated for a dedicated art creation center, robust nursery operations, and expansive agriculture zones. These areas are designed to flow seamlessly towards the garden area situated at the upper left corner of the property, creating an integrated and productive landscape.

On the right side of the main driveway, a gentle slope will be meticulously shaped into a vibrant orchard and a sacred geometry flower garden. These features will be elegantly defined by terraced stone walls, leading gracefully up to the elevated site of the 7,200 sq. ft. main residence. This prime location offers spectacular, unobstructed panoramic views of the majestic Topa-Topa Mountains, renowned for capturing the iconic Ojai Pink Moment each evening. The immediate backyard of the main residence will feature a spacious green lawn and an open yard, anchored by a substantial 3,600 sq. ft. vintage pool structure, which presents unique opportunities for creative repurposing into artistic, ecological, or communal amenities.

3.2.2. Middle Section

The central portion of the property is defined by a natural laneway that traverses a slightly lower paddock. This area is already securely fenced, making it immediately suitable for various livestock operations. The landscape here is dotted with mature oaks and sycamores, providing natural shade and aesthetic appeal. Two existing sheds, currently utilized for gym and storage purposes, offer significant potential for redevelopment or conversion into an additional ADU, further enhancing the property's functional capacity. Crucially, this zone is adjacent to a seasonal creek and is planned to house the central community kitchen and gathering area. This communal hub will be thoughtfully constructed around a historic 100+ year-old stone fireplace and BBQ pit, serving as a focal point for social interaction. It will include essential amenities such as bathrooms, ample

seating, and shaded spaces, establishing itself as the vibrant social heart of the eco-village, directly across the creek from McQueen's Garage.

3.2.3. Right Hillside Section

This private, naturally sloped area offers unparalleled seclusion and is ideally suited for the development of dedicated retreat lodging, profound ceremonial grounds, and serene healing sanctuaries. The right side of the access road winding through this section will host the future cabin and dome village, extending organically up into the hillside. On the left side of the road, the seasonal creek meanders alongside the property, creating a tranquil corridor that is perfect for the placement of elevated decks, traditional teepees, luxurious glamping tents, and other nature-based lodging options. The terrain nestled between the road and the creek provides ample space for the integration of 20–30 unique glamping units, each designed to blend harmoniously with the natural landscape. At the furthest extent of this section lies the impressive 3,200 sq. ft. warehouse, famously known as McQueen's Garage, which is designated for transformation into a dynamic hybrid creative studio and a significant ceremonial event venue.

4. Primary Development Projects

This section details the core construction and renovation initiatives that form the backbone of the Sulphur Mountain Eco-Village, each designed to contribute significantly to the project's overall value and revenue generation capabilities.

4.1. Main Residence Compound

The Main Residence Compound is envisioned as both a high-comfort private dwelling and the central operational and hospitality hub for the entire eco-village. Strategically located on the back-left corner of the property, it commands spectacular panoramic views of the Topa-Topa Mountains, making it a symbolic and energetic centerpiece of the land. The total construction budget allocated for this compound is **\$2.5 million**.

Structure Overview:

- **Main House:** A substantial 5,000 sq. ft. to 7,200 sq. ft. residence, designed to accommodate 6 bedrooms. This will serve as a premium space for guests, hosts, and high-level programming, offering luxury and comfort within the eco-village setting.
- **Guesthouse:** A 1,200 sq. ft. support unit featuring 3 bedrooms, ideal for housing facilitators, extended-stay visitors, or providing additional high-end lodging capacity.
- **Gatehouse Remodel:** The existing gatehouse will undergo a significant remodel to become a dedicated 1,200 sq. ft. unit for operations, logistics, and property

management. This ensures efficient on-site coordination and support for all eco-village activities.

Design & Experience: The architectural design of the compound will be inspired by sacred geometry and bio-integrated forms, promoting a harmonious connection with the natural environment. It will feature an open indoor-outdoor layout, a communal kitchen designed for shared culinary experiences, a panoramic lounge offering breathtaking views, and dedicated healing spaces. Elevated decks and soaking areas will provide serene retreats, while direct links to ceremonial zones and hillside trail access will seamlessly integrate the residence with the broader eco-village landscape.

Strategic Uses: The Main Residence Compound will serve as a central hub during retreats, events, and immersive experiences, facilitating a cohesive and enriching visitor journey. It will also be capable of hosting private VIP residencies, specialized workshops, or exclusive wellness getaways. Furthermore, its premium design and location make it an ideal candidate for high-end rentals for media shoots, corporate retreats, or private bookings, diversifying its utility and revenue potential.

Revenue Streams: Expected revenue will be generated through luxury short-term stays (via platforms like Airbnb and direct bookings), comprehensive retreat rental packages, executive hosting services, and its use as a premium location for media and content production.

Permitting Status: Crucially, permitting for all three structures within the Main Residence Compound is ready for submission and is anticipated to clear within 10 days, allowing for a swift commencement of construction.

4.2. McQueen' s Garage – Creative & Ceremonial Hall

McQueen' s Garage, a historic 3,200 sq. ft. steel-frame warehouse, holds a unique place within the eco-village. Originally owned by the legendary Steve McQueen, it is situated adjacent to the seasonal creek and at the base of the hillside where the guest lodging village begins. With impressive 16+ ft ceilings and a large, openable front facade, this structure is poised for a transformative renovation with a budget of **\$500,000**. It will be reimagined as a dynamic hybrid indoor-outdoor venue, serving as a focal point for creative production, immersive gatherings, and sacred ceremonies.

Planned Uses: The transformed McQueen' s Garage will host a diverse array of activities, including its function as a music and film studio for both live and recorded productions. It will be an ideal setting for farm-to-table dinners, educational workshops, and private events. Additionally, it will serve as a primary venue for retreat hosting, profound sound journeys, and various ceremonial gatherings, aligning with the eco-village's spiritual and wellness offerings.

Design Integration: The design will ensure seamless integration with its surroundings. It will be strategically positioned beside the creek, complementing the community kitchen, hangout area, restrooms, and dining space. Its proximity to the main ceremonial area, which includes a hillside kiva and a sacred altar nestled under an ancient oak tree, will enhance its role as a spiritual nexus. Direct flow between indoor and outdoor event spaces, facilitated by pathways leading up the hillside to the guest units, will create a cohesive and accessible experience for all attendees.

Revenue Streams: This versatile venue will generate income through studio and venue rentals for artists, producers, and event hosts. It will also host ticketed dinners, performances, and various events, retreats, and ceremonies. Furthermore, its integrated use within the broader eco-village programming, including residencies and seasonal festivals, will contribute significantly to its revenue potential.

4.3. Guest Lodging Units

The eco-village is meticulously designed to accommodate up to **50 guest lodging units**, offering a diverse range of experiences for visitors. These units are intentionally varied in form and pricing tiers to cater to a wide spectrum of retreat guests, short-term renters, and long-term wellness residents, ensuring broad appeal and maximizing occupancy.

Lodging Types Include:

- **Custom-Built Guest Chalets:** High-comfort, insulated units designed for premium stays, offering a luxurious experience within the natural setting.
- **Cobb Houses / Earth-Built Dwellings:** Hand-sculpted, natural homes that will be part of community co-build events, offering a unique, earthy, and sustainable lodging option.
- **Geodesic Domes & Sacred Geometry Structures:** Iconic and visually striking units, ideal for healing sessions, meditation, and unique immersive experiences.
- **Glamping Units & Safari Tents:** Canvas-based, semi-permanent units that provide an immersive nature experience with comfortable finishes, strategically placed alongside the creek for serene views.
- **Teepees & Yurts:** Culturally inspired structures that can be utilized for ceremonial purposes or as distinctive overnight experiences, offering a connection to indigenous traditions.
- **Campers/Mobile Homes/Airstreams:** Flexible spaces for adaptable stays or portable accommodation, catering to guests seeking a more mobile or unconventional lodging option.

Infrastructure & Amenities: Each lodging cluster will be supported by essential amenities designed to enhance the guest experience while maintaining a low environmental footprint. These include wooden decks for outdoor relaxation, shaded sitting areas, and

communal fire pits for gathering. Shared outdoor showers and compost toilet clusters will promote sustainable living practices. Open-air kitchen pavilions and community gathering spots will foster interaction and shared meals. Well-maintained pathways will connect the lodging clusters with the ceremony areas, gardens, and event zones, ensuring ease of access and encouraging exploration of the eco-village.

Function & Revenue Strategy: The guest lodging units will serve multiple functions, primarily generating revenue through Airbnb and other short-term rental platforms. They will also be integral to retreat programming and hosted events, providing on-site accommodation for participants. Additionally, these units can offer long-term eco-residency opportunities for contributors and facilitators, fostering a stable on-site community. The cluster design allows for a scalable roll-out and modular growth, enabling the eco-village to expand its lodging capacity in response to demand. The strategic mix of seasonal and permanent units will further increase flexibility and optimize occupancy rates throughout the year.

4.4. Housing for Core Team and Farm Housing / Accommodation (Small Footprint)

To ensure the continuous and efficient operation of the Sulphur Mountain Eco-Village, a dedicated cluster of **5-7 small-footprint homes** will be established. These units, which may include tiny homes, cobb houses, or modular cottages, are essential for housing the core operational team. Their on-site presence is critical for maintaining consistent support for land stewardship, agricultural activities, hospitality services, event management, and ongoing infrastructure development.

Key Roles Housed On-Site: This housing will accommodate vital personnel, including land and agricultural stewards responsible for maintaining the property's ecological health, retreat and guest facilitators who guide visitor experiences, construction and maintenance personnel ensuring the upkeep and expansion of facilities, and community managers and operations staff who oversee daily functions and foster community cohesion.

Housing Characteristics: The units will be quick-deploy and off-grid capable, emphasizing sustainability and self-sufficiency. They are designed for functional living with a minimal ecological footprint, aligning with the eco-village's core values. Their strategic positioning near agriculture zones, workshops, and operations hubs ensures convenient access for the team, facilitating efficient workflow and rapid response to operational needs.

Strategic Value: Providing on-site housing offers significant strategic advantages. It ensures a consistent presence of key personnel, leading to smoother day-to-day operations and enhanced responsiveness. This approach also reduces outsourcing costs for labor and accommodation, thereby enhancing the project's overall resilience and financial efficiency. Furthermore, these units may offer long-term residency, lease-to-own options, or

stewardship exchange programs for aligned contributors, fostering a deeper commitment and integration within the eco-village community.

5. Comprehensive Agriculture and Food Systems

The Sulphur Mountain Eco-Village is deeply committed to establishing a robust and regenerative agricultural system that not only provides sustenance for the community but also generates diverse revenue streams and serves as an educational hub. This section integrates all aspects of food production, from traditional farming to innovative cultivation methods and animal husbandry.

5.1. Regenerative Farmland Zone

Our property boasts a ready-to-go **3-acre farmland zone** characterized by its rich topsoil, existing garden spaces, and ample flat, sunny areas. This prime agricultural land is designated for a variety of regenerative farming practices, including the development of extensive food forests, the planting of over 500 fruit trees, and the cultivation of diverse gardens for herbs and other produce. An on-site nursery will facilitate plant propagation, organic produce cultivation, and the development of compost and mycelium operations, supporting both our internal needs and external sales.

Agricultural Infrastructure:

- **Nursery and Compost/Mycelium Operations:** Dedicated facilities for plant propagation, composting, and mycelium production, crucial for soil health and sustainable cultivation.
- **Garden Spaces and Beds:** Structured areas for intensive cultivation of various crops.
- **Water Systems:** Implementation of gravity-fed irrigation systems and eco-watering designs, complemented by rainwater harvesting systems to ensure efficient and sustainable water use.
- **Landscape Design:** Thoughtful integration of ecoculture principles, food forest design, diverse landscaping, and the construction of stone walls and sacred geometry gardens to enhance productivity and aesthetic appeal.
- **Soil Remediation:** Utilization of mycelium for soil remediation in former waste zones, actively restoring ecological balance and fertility.

5.2. Livestock Integration and Animal Husbandry

A regenerative livestock program is central to enhancing land vitality, promoting community self-sufficiency, and offering valuable educational experiences. Livestock will be introduced in strategic phases, ensuring proper infrastructure is in place.

Included Animals and Their Contributions:

- **Chickens:** Primarily for egg production, they also contribute to compost activation and natural pest control.
- **Ducks:** Utilized for aquatic pest control, egg production, and maintaining ecosystem balance within water features.
- **Goats:** Essential for brush management, with potential for dairy production.
- **Sheep:** Contribute to grass maintenance and offer optional wool production.
- **Cattle:** Raised for beef and dairy, integrating into rotational grazing systems.
- **Pigs:** Raised for meat and breeding, contributing to land management through foraging.
- **Bees:** Crucial for pollination across the farm and for honey/wax production.

Revenue Opportunities from Livestock: Beyond their ecological benefits, livestock will generate income through farm products (eggs, honey, meat, wool), educational tours, grazing services, and potential equine experiences. Livestock infrastructure will include rotational paddocks, mobile shelters, and trough systems, all integrated with compost and food systems. Initial implementation is targeted for Phase 2, following the completion of essential utilities and fencing.

Livestock Business Financials (from provided data):

- **Initial Investment:** \$33,000 (Fencing & Infrastructure: \$5,000, Watering Systems: \$3,000, Initial Livestock Purchase: \$15,000, Feed & Maintenance (Year 1): \$7,500, Miscellaneous Costs: \$2,500).
- **Expected Annual Revenue:** \$108,000 (Goats: \$15,000, Chickens: \$20,000, Sheep: \$16,000, Cattle: \$30,000, Pigs: \$15,000, Beekeeping: \$12,000).
- **Profit:** \$75,000
- **ROI:** 227.27%
- **Payback Period:** 12 months
- **Scaling Potential:** Total Scaled Revenue: \$216,000 (doubling revenue within 2-3 years).

5.3. Mushroom Cultivation

The eco-village will integrate a dynamic mushroom cultivation operation, leveraging both innovative trailer-based systems and traditional log-based methods.

Trailer-Based Mushroom Farming:

- **Concept:** Partnering with a specialist in building self-sustainable 40ft growing trailers, we will acquire 2-3 such units for on-property mushroom cultivation. This method offers a controlled environment for high-yield production.

- **Initial Investment:** \$5,000 - \$10,000 for setup, including trailers, initial spawn, and equipment.
- **Job Creation:** 1-2 dedicated jobs for farm management and cultivation.
- **Revenue Generation:** Expected to begin within 1-2 months post-setup, starting at \$500/month and scalable up to \$10,000 - \$20,000 per month, contingent on growth, supply, and market demand.
- **Sales Channels:** Primarily targeting local restaurants and hotels, with potential expansion to farmers' markets and online sales.

Log-Based Mushroom Cultivation (Complementary):

- **Concept:** Cultivating culinary mushrooms on logs on the hillside, integrating with the natural forest environment.
- **Initial Investment (500 logs):** \$2,000 (Spawn Purchase: \$1,500, Equipment & Miscellaneous: \$500).
- **Expected Yield (500 logs):** 1,500 lbs (3 lbs/log).
- **Selling Price:** \$10/lb.
- **Total Revenue:** \$15,000.
- **Profit:** \$13,000.
- **ROI:** 650.00%.
- **Payback Period:** 12 months.
- **Scaling Potential (1,000 logs):** Additional Investment: \$4,000, Total Yield: 3,000 lbs, Revenue: \$30,000, Profit: \$26,000, ROI: 650.00%.
- **Investment Timeline (Log-based):** Month 0-1: Initial investment; Month 1-2: Inoculation and incubation; Month 9-18: First harvest; Month 12: Expected break-even; Month 18+: Full harvesting cycle and expansion.
- **Sales Channels:** Farmers' markets, online sales, and B2B collaborations with local partners for product integration.

5.4. Beekeeping Operations

Our beekeeping initiative will be established through a collaborative model with local beekeepers, allowing us to host their bee families on the property. This partnership minimizes initial costs while maximizing output and ecological benefits.

Partnership Model:

- **Collaboration:** Local beekeepers will manage their hives on our property.
- **Responsibilities:** Beekeepers will be responsible for bee care and honey production.

- **Agreement:** We will have a sharing agreement for honey and other bee products (e.g., wax) in exchange for providing space and a safe, dedicated structure for honey extraction and processing.

Initial Setup & Investment: A one-time investment of \$10,000 is allocated for clearing and securing a dedicated space, including fencing and a shed for processing. This cost-efficient approach leverages external expertise and resources.

Revenue Generation: Revenue from honey and beeswax products is anticipated to begin within 3 months after the initial setup. Sales will be conducted online and at local farmers' markets, aligning with the eco-village's direct-to-consumer strategy.

This integrated approach to agriculture ensures a diverse, resilient, and profitable food system that supports the eco-village's mission of sustainability and community well-being.

5.4. Agricultural Revenue Streams and Sales Channels

Our comprehensive agricultural initiatives will yield a wide array of products, contributing directly to the eco-village's revenue streams.

- **Farm Products:** This includes fresh nursery plants, a variety of fruits, culinary herbs, and essential inputs like mycelium and compost, all produced using regenerative practices.
- **Value-Added Goods:** Beyond raw produce, we will create and sell value-added products such as tinctures, teas, artisanal crafts, and altar tools, enhancing product diversity and market appeal.
- **Sales Channels:** Products will be distributed through Community Supported Agriculture (CSA) boxes, seasonal farm stands, direct-to-consumer online sales, and partnerships with local restaurants and hotels, ensuring broad market reach.

6. Sacred Spaces & Community Zones

The Sulphur Mountain Eco-Village is meticulously designed to foster deep connection, healing, and creative expression through a network of sacred gathering areas, communal hangouts, and immersive experiential zones. These spaces are thoughtfully integrated throughout the property to support ceremonial work, embodiment practices, profound nature immersion, and spontaneous joyful play, forming the emotional and energetic heart of the eco-village.

6.1. Ceremonial Infrastructure

Dedicated infrastructure for ceremonial practices is a cornerstone of the eco-village, providing spaces for both intimate and large-scale gatherings:

- **Multiple Kivas:** The property will feature several kivas, including a full-scale ceremonial kiva designed to accommodate large gatherings, facilitating ancient and modern spiritual practices.
- **Ritual Zones:** Sacred fire circles and ritual zones are strategically located under mature oak trees, offering natural, powerful settings for various ceremonies and personal reflection.
- **Sweat Lodges:** Traditional sweat lodges will be available, providing a space for purification, healing, and community bonding.
- **Outdoor Platforms:** Dedicated outdoor ceremony platforms are designed for practices such as sound healing, breathwork, movement, and sacred circles, allowing participants to connect deeply with nature during their experiences.

6.2. Wellness & Embodiment Facilities

Promoting physical and mental well-being is integral to the eco-village experience, supported by a range of facilities:

- **Nature Gym:** An innovative outdoor gym featuring hanging ropes, logs, and other natural elements for primal movement stations, encouraging a holistic approach to fitness.
- **Indoor/Outdoor Hall:** A versatile space for strength training, breathwork, yoga, and dance practices, offering flexibility for various movement modalities regardless of weather conditions.
- **Contemplation Areas:** Dozens of flat, serene areas are scattered throughout the property, providing secluded spots for meditation, yoga, or silent contemplation, allowing for personal introspection and tranquility.
- **Hydrotherapy:** Integrated into the natural setting, facilities for saunas, ice baths, and hot tubs will offer therapeutic hydrotherapy experiences, promoting relaxation and recovery.

6.3. Creative & Community Features

Beyond formal structures, the eco-village fosters creativity and community through organic gathering points:

- **Communal Kitchen & Dining:** A shaded communal kitchen and creekside dining area, equipped with long tables and benches, will serve as a central hub for shared meals, culinary workshops, and community feasts.
- **Recreational Areas:** Swings, hammocks, and rope nets suspended under trees and along the creek provide playful and relaxing spots for all ages, encouraging

spontaneous interaction and enjoyment of the natural surroundings.

- **Quiet Zones:** An outdoor library, various reading nooks, and quiet creative alcoves offer peaceful retreats for intellectual pursuits, artistic inspiration, and personal reflection.
- **Interactive Spaces:** Dedicated areas for interactive building projects, access to workshops, garden crafting, and crystal grid installations will encourage hands-on participation and collaborative creation among community members and guests.

6.4. Landscape Design Integration

The overall landscape design is thoughtfully curated to enhance the flow and experience within the eco-village:

- **Nature Trails:** Curated nature trails weave through sacred geometry gardens and elemental installations, inviting exploration and deeper connection with the land.
- **Integrative Flow:** The design ensures a seamless and organic flow between ceremonial, residential, and communal areas, facilitating ease of access and encouraging natural movement and interaction throughout the property.

These interconnected elements collectively define the unique character of the Sulphur Mountain Eco-Village, offering a sanctuary for profound personal transformation and joyous collective experience, enriching the lives of all who visit and reside within its embrace.

7. Utilities Access and Upgrading on Site

Efficient and sustainable utility infrastructure is paramount to the successful operation and long-term viability of the Sulphur Mountain Eco-Village. Comprehensive plans are in place to upgrade and expand existing systems, ensuring reliable access to essential services across the entire property.

7.1. Water Systems

Existing Infrastructure: The property currently benefits from an active on-site well, which boasts a robust production rate of 17 gallons per minute. This well is already connected to the main house, the designated garden space, the left side of the property (earmarked for future agriculture, nursery, and art center setups), and the Gatehouse. This existing capacity provides a strong foundation for the eco-village's water needs.

Required Upgrades and Enhancements: To support the expanded vision of the eco-village, several critical upgrades are planned:

- **Extension of Water Lines:** New water lines will be extended to reach the hillside lodging units, all agricultural areas, and the dedicated team housing, ensuring water

access across the entire developed footprint.

- **System Updates:** Existing water lines, tanks, and pumps will be updated and serviced to optimize efficiency and reliability.
- **Well Service/Upgrade:** The well itself will undergo necessary servicing and potential upgrades to maintain its output and ensure long-term sustainability.
- **Optional Enhancements:** Consideration is given to installing additional water storage tanks and pressure booster systems, particularly for supply to the hillside areas, to ensure consistent water pressure and availability even during peak demand.

7.2. Electrical Systems

Existing Infrastructure: The property currently has two live power lines connected, serving the main house, the well, and the gatelodge. This provides a baseline for immediate power needs.

Required Upgrades and Enhancements: The eco-village aims for energy independence and expanded coverage:

- **Off-Grid Solar Grid Systems:** Comprehensive off-grid solar grid systems, complete with battery storage, are planned to provide full site coverage, significantly reducing reliance on external power sources and promoting sustainability.
- **Electrical Trenching:** Extensive electrical trenching will be required to extend power to the hillside zones and remote units, ensuring that all new developments and lodging options have reliable electricity.

7.3. Roads & Access

Existing Infrastructure: An internal road network is already in place, connecting the key zones of the property, facilitating initial movement and access.

Required Upgrades and Enhancements: To ensure durability and year-round accessibility, particularly for expanded operations:

- **Grading and Resurfacing:** All internal roads will undergo grading and resurfacing to enhance their durability and provide smooth, reliable access throughout the year.
- **Access Road Expansion:** A ¼-mile access road expansion is needed to reach the upper hillside and retreat areas, opening up new development zones.
- **Utility Trenching:** Crucially, utilities (water and power) will be trenched alongside the expanded road, streamlining infrastructure development and minimizing future disruptions.

7.4. Drainage & Septic Systems

Existing Infrastructure: A significant infrastructural advantage is that the main residence is already connected to the city sewer system, simplifying waste management for the primary dwelling.

Required Upgrades and Enhancements: To accommodate new developments and off-grid units:

- **City Drain Connection Expansion:** Permits and trenching will be required to expand the city drain connection to the guesthouse and other ADUs, subject to municipal approval, to integrate these structures into the existing municipal system where feasible.
- **Off-Grid Solutions:** For off-grid units such as domes, tents, and cabins, sustainable solutions will be implemented, including compost toilets, greywater filtration systems, and modular septic systems where necessary, ensuring responsible waste management in remote areas.

7.5. Propane / Gas Systems

Existing Infrastructure: A refillable propane tank is currently connected to the main house for heating and cooking needs. Additionally, a secondary propane tank is located at the future community kitchen area, though it is currently disconnected.

Planned Enhancements: To support culinary and heating needs across the eco-village:

- **Community Kitchen Connection:** The secondary tank can be reconnected to support off-grid culinary operations at the creekside kitchen, providing essential cooking fuel for communal gatherings.
- **Additional Supply:** Additional propane lines or tanks may be added to serve domes or glamping units if needed for seasonal heating or cooking, offering flexibility and comfort for guests in these unique lodging options.

These planned utility upgrades are critical investments that will enhance the functionality, sustainability, and overall appeal of the Sulphur Mountain Eco-Village, supporting its diverse operations and long-term growth.

8. Scaling Plan (Phased Development)

The development of the Sulphur Mountain Eco-Village is structured into distinct, sequential phases, each designed to build upon the previous one, ensuring efficient capital deployment, strategic growth, and the progressive activation of revenue streams. This phased approach allows for adaptive management and optimizes resource allocation as the project evolves from foundational infrastructure to full operational capacity.

8.1. Phase 1: Core Development & Activation (Months 0–12)

This initial phase focuses on establishing the foundational infrastructure, essential team housing, and initiating core activities that will enable subsequent development and early revenue generation. It is a period of intensive construction and preparation.

Key Activities during Phase 1:

- **Permitting and Earthworks:** Finalization of all necessary permits and commencement of significant earthwork operations for the establishment of internal roads, utility trenches, and building foundations. This lays the groundwork for all future construction.
- **Core Team Housing Installation:** Installation of 5 quick-deploy tiny homes or cobb/mobile units. These units are crucial for housing the core operational team on-site, ensuring continuous support for land stewardship, agriculture, and initial development activities.
- **Main Residence and Gatehouse Construction:** Commencement of construction for the Main Residence and the Gatehouse. These structures are central to the eco-village's hospitality and operational functions, and their early development is prioritized.
- **Hillside Access Road Development:** Beginning of excavation and extension work for the hillside access road. This infrastructure is vital for reaching future lodging units and remote areas of the property.
- **Agricultural System Setup:** Establishment of the on-site nursery, initial garden areas, and comprehensive compost systems. These elements are fundamental to the regenerative agriculture initiatives and future food production.
- **Art Workshop Center and Material Depot:** Launch of construction for the multi-use art workshop center and the establishment of a centralized material depot. These facilities will support creative endeavors and streamline construction logistics.
- **Initial Livestock System Setup:** Commencement of setting up basic livestock systems, including fencing and shelter for chickens, ducks, and goats. This marks the beginning of the integrated animal husbandry program.
- **Utility Infrastructure Installation:** Installation of initial solar power systems, water lines, and other essential utility infrastructure, particularly extending to the hillside areas to support early developments.
- **Community Engagement and Collaboration:** Initiation of early collaborations with investors, volunteers, and potential residents. This fosters a sense of community ownership and participation from the outset.
- **Pilot Events and Co-builds:** Hosting of pilot events, workshops, and co-build activities. These serve to engage the community, test operational models, and generate early interest and feedback.

8.2. Phase 2: Retreat & Community Infrastructure (Months 12–18)

Building upon the foundations laid in Phase 1, this phase focuses on enhancing the eco-village's capacity for hosting guests and fully activating community zones. The emphasis shifts towards creating a comprehensive retreat experience and expanding agricultural output.

Key Activities during Phase 2:

- **Guesthouse Completion and McQueen's Garage Renovation:** Completion of the Guesthouse and the full renovation of McQueen's Garage into its intended function as a versatile event and studio space. These facilities significantly expand the eco-village's capacity for hosting and creative activities.
- **Hillside Lodging Development:** Beginning of construction for additional tiny homes and other lodging structures on the hillside, increasing the overall guest accommodation capacity.
- **Community Hub Finalization:** Finalization of the central community kitchen, shared showers, and bathroom facilities located by the creek. These amenities are crucial for supporting larger gatherings and guest comfort.
- **Agricultural Production Expansion:** Expansion of agricultural production, focusing on fruit trees, herbs, and nursery plants. This increases the volume and diversity of produce available for consumption and sale.
- **Farm-to-Table and Experiential Offerings:** Launch of farm-to-table dinners, outdoor gatherings, and demo retreats. These activities leverage the agricultural output and provide unique experiential revenue streams.
- **Hosting and Seasonal Events:** Commencement of hosting weekend retreats and small seasonal festivals, with full lodging support available. This marks a significant step towards becoming a fully operational retreat center.
- **Sacred and Wellness Zone Finalization:** Finalization of dedicated zones for ceremony, wellness practices, and broader community integration, enhancing the spiritual and holistic offerings of the eco-village.

8.3. Phase 3: Full Eco-Village Operation & Cultural Launch (Months 18+)

This final phase represents the full realization of the Sulphur Mountain Eco-Village vision, characterized by expanded programming, scaled revenue generation, and year-round activation. The focus is on maximizing the eco-village's potential as a thriving, self-sustaining community and a model for regenerative living.

Key Activities during Phase 3:

- **Lodging Unit Expansion:** Growth of guest lodging units to reach the full capacity of 50+ units, accommodating a larger influx of visitors and residents.
- **Comprehensive Retreat Calendar:** Establishment of a full, year-round retreat calendar, featuring a diverse range of programs and facilitator residencies. This ensures consistent programming and maximizes occupancy.
- **Artist and Permaculture Residencies:** Hosting of artist residencies, intensive permaculture trainings, and various cultural gatherings. These programs attract specialized audiences and contribute to the eco-village's educational mission.
- **Agricultural System Scaling:** Further expansion of livestock and agricultural systems to support both internal consumption and external market sales, including Community Supported Agriculture (CSA) programs.
- **Global Community Engagement:** Opening the eco-village to international guests, creators, and aligned residents, fostering a diverse and global community.
- **Long-Term Initiatives:** Initiation of long-term strategic initiatives, including cooperative housing models, the development of educational hubs, and the establishment of formal village governance structures, ensuring the enduring legacy and evolution of the Sulphur Mountain Eco-Village.

9. Revenue Model Overview

The Sulphur Mountain Eco-Village is strategically designed with a diverse portfolio of income streams, each meticulously planned to be scalable, synergistic, and adaptable to seasonal variations. This multifaceted approach ensures financial stability and maximizes profitability by blending recurring rentals, value-added experiences, and product-based income across all operational areas.

9.1. Lodging Revenue

Our guest lodging units are a primary source of income, offering a range of accommodation types to cater to diverse preferences and budgets. The revenue model is optimized through various channels and pricing strategies.

- **Unit Types and Use Cases:**
 - **Domes / Chalets:** These premium units are ideal for retreat guests and high-end Airbnb rentals, commanding rates between \$150–\$300 per night. They are designed for year-round occupancy, providing consistent income.
 - **Glamping Tents:** Offering an immersive nature experience, these units are perfect for seasonal festivals and short-term stays. Priced at \$100–\$180 per night, they are

primarily utilized during peak seasons, capitalizing on demand for unique outdoor accommodations.

- **Tiny Homes:** Dedicated for core team members and long-term eco-residents, these units are leased on a monthly basis, ranging from \$600–\$1200 per month. They provide stable, recurring income and ensure on-site support for the eco-village operations.
- **Revenue Drivers:** The primary drivers for lodging revenue include bookings through platforms like Airbnb, direct reservations, comprehensive retreat lodging packages that bundle accommodation with experiences, and long-term residency leasing for facilitators and team members. This diversified approach ensures high occupancy rates and maximizes yield per unit.

9.2. Retreats & Events

The eco-village will host a dynamic calendar of retreats and events, ranging from intimate gatherings to larger festivals, each contributing significantly to the overall revenue. These events leverage the unique setting and facilities of Sulphur Mountain.

- **Format and Revenue Structure:**
 - **Weekend Retreats:** Designed for 15–40 participants, these are held monthly and generate revenue through ticket sales combined with lodging packages, offering a holistic experience.
 - **Ceremonies:** Intimate gatherings for 10–30 people, held bi-weekly, with a pay-per-ceremony model. These events foster community and provide unique spiritual experiences.
 - **Festivals:** Larger-scale events for 50–150 attendees, held quarterly, generating income from entry fees and vendor participation, creating vibrant community celebrations.
- **Revenue Drivers:** Key revenue drivers include ticket sales for events, comprehensive accommodation packages, food and beverage sales, fees for ceremonial hosting, rentals of sacred spaces, and sales of merchandise and related products. This multi-pronged approach ensures robust income generation from event programming.

9.3. Studio & Creative Rentals

McQueen's Garage, transformed into a state-of-the-art creative and ceremonial hall, will serve as a significant revenue center through various rental and artistic collaborations.

- **Offerings:** The facility will be available for music, video, and photography studio rentals, catering to artists and producers seeking a unique and inspiring environment. It will also offer artist residencies, bundling space and lodging for extended creative

periods. Furthermore, the eco-village will engage in commissioned sacred art, installations, and rentals, leveraging its artistic capabilities.

9.5. Education & Experiences

Leveraging the expertise and unique environment of the eco-village, a robust educational program will generate significant income while fostering knowledge sharing and community engagement.

- **Workshops:** Offerings include natural building workshops, permaculture intensives, and other skill-based training sessions, attracting participants interested in sustainable living practices.
- **Co-builds:** Residencies and skill exchange programs will allow participants to contribute to the eco-village’ s development while gaining hands-on experience, often structured with a fee or work-trade model.
- **Paid Experiences:** Specialized experiences such as cooking classes, medicine-making workshops, and yoga retreats will provide immersive learning opportunities, generating revenue through participation fees.

9.6. Projected Monthly Revenue by Phase (Recap from SulphurMountain-DevelopmentOverview&Participation-04.16.2025(3).docx.pdf)

The following table provides a detailed breakdown of projected monthly revenue streams, indicating their launch month and income type, illustrating the phased activation of the eco-village’ s financial model:

Revenue Stream	Estimated Monthly Revenue (\$)	Launch Month	Income Type
Tiny Homes (Team Housing)	\$5,000	Month 3	Rent
Nursery & Agriculture	\$3,000	Month 5	Product Sales
Pilot Events / Workshops	\$2,500	Month 6	Ticketed
Creative Workshop Center	\$1,500	Month 6	Workshops
Guest Lodging Units	\$18,000	Month 12	Rent
McQueen’ s Garage	\$8,000	Month 14	Event + Studio

Farm-to-Table Dinners & Retreats	\$7,000	Month 16	Experiential
Full Retreat Hosting Packages	\$35,000	Month 18	All-Inclusive
Studio Rental & Media	\$6,000	Month 18	Rental + Licensing
CSA & Product Sales	\$5,000	Month 18	Product + CSA
Ceremonial Programs	\$4,000	Month 20	Ceremonial Events

This phased revenue activation ensures a steady increase in income as the eco-village develops, supporting its financial sustainability and long-term growth.

10. Partnership & Collaboration Models

The Sulphur Mountain Eco-Village is designed to foster a collaborative ecosystem, actively seeking partnerships and engagement models that align with its regenerative ethos. These models are structured to attract diverse stakeholders, including investors, residents, and skilled contributors, ensuring mutual benefit and the sustainable growth of the project.

10.1. Small Footprint/Tiny Home Partner Options

Recognizing the growing interest in minimalist and sustainable living, the eco-village offers tailored opportunities for tiny home owners and manufacturers:

- **Land Lease Agreements:** This model allows tiny home owners or manufacturers to lease designated parcels of land on a long-term basis within the eco-village. Leases are meticulously structured to provide residents with dedicated space and access to community amenities, while simultaneously generating predictable rental income for the eco-village. These agreements may include provisions for utility access, maintenance support, and clauses for community contribution, fostering a symbiotic relationship.
- **Joint Venture Development:** We are open to establishing joint venture agreements with tiny home builders or designers who are interested in co-creating branded units. These units would be specifically designed to resonate with the unique ethos and architectural language of the eco-village. Profits generated through subsequent rental or resale of these co-developed units would be shared proportionally, based on the

investment and operational roles of each party, encouraging innovative and aligned development.

- **Revenue-Sharing Residency:** For residents opting for a rental-based residency, a unique revenue-sharing model is available. Occupants may contribute a defined percentage of their rental income (derived from short-term rentals like Airbnb or subleases) back to the eco-village's operating fund. This model not only encourages aligned entrepreneurship among residents but also secures a recurring income stream for the ongoing land management and maintenance of the eco-village, reinforcing a shared commitment to its success.

10.2. Investment & Stakeholder Engagement

The project offers various avenues for financial investment and stakeholder engagement, designed to provide both attractive returns and meaningful involvement:

- **Equity Partnerships:** Targeted capital partners have the opportunity to acquire equity in distinct phases or specific structural developments within the project. Investment tiers are directly linked to tangible assets and forecasted revenue generation, offering a clear pathway for financial return alongside strategic involvement in the eco-village's growth and direction.
- **Cooperative Ownership Structures:** The eco-village may incorporate a cooperative framework, allowing aligned collaborators—such as facilitators, long-term residents, or educators—to acquire membership shares. Members within this structure would receive dividends, enjoy voting rights in key decisions, and gain priority access to space usage and services, fostering a deep sense of collective ownership and participation.
- **Phased Investment Packages:** To accommodate diverse investor profiles, we offer modular funding rounds. These could include specific phases such as "Phase 1: Tiny Homes," "Phase 2: Event Center," or "Phase 3: Agricultural Infrastructure." These packages are transparently structured with Key Performance Indicators (KPIs), clear build-out timelines, and flexible terms for partial exits or reinvestment, providing clarity and adaptability for investors.

10.3. Community Integration Pathways

Beyond formal agreements, the eco-village actively cultivates community integration through various pathways, encouraging participation and skill exchange:

- **Skill-Based Contribution Agreements:** Qualified individuals possessing essential skills—such as construction, regenerative farming, holistic healing, or education—are invited to offer their services in exchange for housing credits, land usage rights, or equity options. The terms of these contributions are formally documented via contract, with

progress tracked through defined milestones, ensuring fair exchange and mutual accountability.

- **Residency Frameworks:** The eco-village offers a tiered range of residency formats to suit different needs and levels of engagement:
 - **Short-Term Rentals:** Catering to retreat guests and visiting facilitators, providing flexible accommodation options.
 - **Seasonal Residency:** Designed for individuals like farm workers or artists-in-residence, offering temporary stays aligned with specific project needs or creative periods.
 - **Long-Term Leasing:** For core residents, teachers, and team members, providing stable, extended living arrangements. Each tier is clearly defined with different access rights, responsibilities, and benefits, ensuring clarity for all participants.
- **Experiential Onboarding & Co-Build Pathways:** Workshops, retreats, and public co-build events serve as dynamic entry points for individuals and groups. These experiences allow prospective community members to directly engage with the land, participate in its development, and assess their compatibility with the eco-village's ethos before formal engagement. These hands-on pathways also serve as valuable training grounds for future residents and stewards, fostering a deeper connection and understanding of the project.

10.4. Invitation to Collaborate

The Sulphur Mountain Eco-Village extends a heartfelt invitation to aligned partners to join us in building this fully functioning, regenerative community. This is a unique opportunity to engage directly—whether through capital investment, creative contributions, or hands-on participation—with a living, land-based project that is already underway and poised for significant growth. We believe that collective effort and shared vision are paramount to realizing the full potential of this transformative endeavor.

Opportunities for involvement are diverse and flexible, catering to a wide range of expertise and commitment levels:

- **Equity-based Investment:** Opportunities exist for direct equity investment in core infrastructure or specific housing phases, offering a tangible stake in the project's success and growth.
- **Residency and Co-build Participation:** Individuals can participate through residency programs or by joining co-build initiatives, contributing their skills and labor in exchange for living experiences and community integration.
- **Retreat and Event Collaboration:** We welcome collaborations with aligned facilitators, event organizers, and program leaders who wish to host their offerings within the

unique and inspiring setting of the eco-village.

- **Long-term Partnership Models:** We are actively seeking long-term partnership models with tiny home developers, wellness operators, and creative brands who wish to establish a lasting presence and contribute to the eco-village's diverse offerings.

We encourage all interested parties to reach out and explore how their vision and resources can align with ours to co-create a thriving, sustainable future at Sulphur Mountain.

11. Financial Summary and Projections

The financial framework of the Sulphur Mountain Eco-Village is designed for robust growth and sustainability, underpinned by a strategic blend of initial investment, phased development, and diversified revenue streams. This section provides a comprehensive overview of the project's financial standing, projections, and the strategic allocation of funds.

11.1. Overall Project Financials

- **Current Land Appraisal (As Is):** The property currently holds an appraised value of **\$2.3 million**, reflecting its inherent worth and potential.
- **Projected Value Upon Completion (ARV):** Upon full build-out and stabilization, the eco-village is projected to achieve an After-Repair Value (ARV) exceeding **\$6.9 million**, demonstrating a significant return on investment and value creation.
- **Loan Amount Requested:** An initial **\$1.65 million** is requested. This comprises \$1.45 million for refinancing existing property obligations and covering closing costs, and an additional \$200,000 specifically allocated for the immediate renovation and enhancement of the main house.
- **Purchase Price (Refinance + Partner Buyout):** The total transaction value, encompassing the refinance and the critical partner buyout, is set at **\$2.3 million**.
- **Rehab Budget:** A substantial **\$3 million-plus** is budgeted for phased improvements across the entire property. This includes significant investments in the Main Residence, Guest Units, McQueen's Garage, the Lodging Village, and comprehensive Agriculture Infrastructure.
- **Loan Term:** The initial bridge loan is structured for a term of **12–18 months**, providing the necessary interim financing for the critical early development phases.
- **Interest Rate:** The interest rate for the loan is negotiable, ranging from **7%–12%**, allowing for flexibility based on market conditions and investor terms.
- **Loan-to-Value (LTV):** The Loan-to-Value ratio is projected to be between **65–75%**, based on the current appraisal range of \$1.7 million–\$2.3 million, indicating a

conservative and well-collateralized lending opportunity.

- **Exit Strategy:** The primary exit strategy for the initial loan is a refinance, targeted within **6 months** following the completion of initial renovations. These renovations are expected to increase the property's value by over \$3 million, facilitating a seamless refinance. The long-term strategy extends to 18-24 months for a full refinance or equity restructure, leveraging the multiple income streams generated by the eco-village. Additionally, the borrowers may pursue a DSCR (Debt Service Coverage Ratio) business loan once the property's revenue streams are stabilized and a clear track record of profitability has been established.

11.2. Projected Monthly Revenue by Phase (Cross-reference)

See Section 9.6 for the detailed projected monthly revenue table and launch timeline. This section summarizes financial implications without repeating the table.

11.3. Additional Revenue Streams from Integrated Businesses

Beyond the core eco-village operations, several integrated business ventures are projected to significantly enhance overall revenue:

- **Mushroom Cultivation:** This venture is anticipated to scale rapidly, with revenue projections ranging from an initial \$500 per month up to a substantial \$10,000–\$20,000 per month, depending on market demand and operational scaling.
- **Beekeeping:** Revenue generation from beekeeping operations is expected to commence within 3 months after the initial setup, contributing to the agricultural product sales.
- **Livestock Farming:** The comprehensive livestock program is projected to generate an annual revenue of **\$108,000**, diversifying the agricultural income streams.
- **Educational Partnerships & Workshop Monetization:** Leveraging the eco-village's diverse offerings, educational programs and workshops are projected to generate an annual revenue potential ranging from **\$70,000 to over \$335,000**, depending on the scale and variety of collaborations.
- **Event Hall and Wellness Center:** The utilization of McQueen's Garage as a dedicated event hall and wellness center is expected to yield significant revenue from weekly classes, monthly spiritual gatherings, seasonal retreats, festivals, weddings, and various wellness services.

11.4. Use of Funds (Initial Loan Allocation)

The initial \$1.65 million loan will be strategically allocated to address immediate financial needs and kickstart critical development:

- **\$1.45 Million:** This substantial portion is designated for the refinance of the existing property loan and to cover all associated closing costs, resolving the immediate financial pressure and securing the property.
- **\$200,000:** This amount is specifically earmarked for the immediate renovation and enhancement of the main house, a key component for early revenue generation and property value appreciation.
- **Additional Funds (from Rehab Budget):** The broader \$3 million-plus rehab budget will be deployed in phases across various project components, including the development of guest units, McQueen's Garage, the lodging village, and agricultural infrastructure, ensuring comprehensive development.

5.5. Investment Timeline for Agricultural Ventures

The development and revenue generation for the integrated agricultural ventures are structured across a clear timeline:

- **Month 0-1:** Initial investment and preparation for mushroom farming (spawn purchase, equipment).
- **Month 1-2:** Inoculation of logs and incubation begins for log-based mushroom farming.
- **Month 0-2:** Setup of fencing, water systems, and general infrastructure for livestock farming.
- **Month 3-6:** Purchase and acclimation of initial livestock.
- **Month 3:** Revenue generation commences for beekeeping operations.
- **Month 9-18:** First harvest of log-based mushrooms begins.
- **Month 12:** Expected break-even point for log-based mushroom farming; first major revenue returns from livestock operations.
- **Month 18+:** Full harvesting cycle and reinvestment for expansion in mushroom farming; optimization of operations and increase in livestock quantity for scaling.

5.6. Profitability & ROI for Specific Agricultural Ventures

Detailed financial projections for key integrated agricultural businesses highlight their individual profitability and return on investment:

Mushroom Cultivation (Log-based)

- **Initial Investment:** \$2,000 (comprising \$1,500 for spawn purchase and \$500 for equipment and miscellaneous costs).

- **Expected Yield (500 logs):** A projected yield of 1,500 lbs, based on an average of 3 lbs per log.
- **Selling Price:** \$10 per pound.
- **Total Revenue:** \$15,000.
- **Profit:** \$13,000.
- **Return on Investment (ROI):** An impressive 650.00%.
- **Payback Period:** A rapid 12 months.
- **Scaling Potential (1,000 logs):** With an additional investment of \$4,000, the total yield is projected to reach 3,000 lbs, generating \$30,000 in revenue and \$26,000 in profit, maintaining a 650.00% ROI.

Livestock Business

- **Total Investment:** \$33,000, allocated as follows: \$5,000 for fencing and infrastructure, \$3,000 for watering systems, \$15,000 for initial livestock purchase, \$7,500 for Year 1 feed and maintenance, and \$2,500 for miscellaneous costs.
- **Expected Annual Revenue:** A robust \$108,000, broken down by livestock type: Goats (\$15,000), Chickens (\$20,000), Sheep (\$16,000), Cattle (\$30,000), Pigs (\$15,000), and Beekeeping (\$12,000).
- **Profit:** \$75,000.
- **Return on Investment (ROI):** 227.27%.
- **Payback Period:** A swift 12 months.
- **Scaling Potential:** The total scaled revenue is projected to reach \$216,000, with a strategic plan to double revenue within 2-3 years through optimized operations and increased livestock quantity.

11.7. Investor Terms

Investor terms will be structured to align with the project's long-term vision and provide attractive opportunities for capital partners. These will primarily involve equity partnerships, allowing investors to acquire a stake in distinct phases or structural developments. Cooperative ownership structures will also be explored, offering membership shares with associated dividends and voting rights. Furthermore, phased investment packages will be available, providing modular funding rounds with clear KPIs, build-out timelines, and flexible terms for partial exits or reinvestment, as detailed in Section 10.2.

11.8. Collateral & Security

Primary collateral for the requested financing is the property located at 11962 Sulphur Mountain Road, Upper Ojai, CA (Ventura County), with an As-Is appraisal of approximately \$2.3 million and a projected ARV exceeding \$6.9 million upon completion.

- **Lien Position:** Targeting a 1st position lien as part of the refinance and partner buyout structure.
- **Guarantors:** Personal guarantees anticipated from principals with 25%+ ownership in the borrowing entity (e.g., Mark Pancis; additional guarantors to be finalized at underwriting).
- **Additional Collateral Consideration:** Sponsor has referenced an SKR for emerald-backed assets (~\$21M) that may serve as an enhancement or proof of reserves, subject to lender due diligence and acceptance.

12. Risk Assessment & Mitigation

The Sulphur Mountain Eco-Village project, while offering significant opportunities, also acknowledges inherent risks common to large-scale developments and new ventures. A comprehensive risk assessment has been conducted, and robust mitigation strategies are in place to ensure project resilience and investor confidence. Our approach focuses on proactive management and leveraging the team's extensive experience to navigate potential challenges.

12.1. Project Management & Experience

Risk: Complexities inherent in managing a multi-faceted development project involving diverse components such as real estate, agriculture, hospitality, and technology integration.

Mitigation: The project is spearheaded by a highly experienced management team. This team possesses a combined wealth of expertise in real estate development, hospitality, construction, and technology integration. Their seasoned background equips them to effectively navigate the intricate complexities of the development process, ensuring efficient execution and problem-solving. Key personnel include Mark Pancis (real estate development & financing), Paul Muresan (entrepreneur, digital infrastructure, regenerative development), and Jonathan Braniff (connection, operations & development support).

12.2. Financial Risks

Risk: Foreclosure Threat: The property is currently under threat of foreclosure due to an existing lender requiring repayment of a \$1.3 million loan. Historical actions by a 60% partner, including attempts to list the property below market value, previously undermined appraisal and refinancing opportunities.

Mitigation: A timely refinance and partner buyout are central to the project's immediate strategy. This will definitively resolve the partner conflict, prevent foreclosure, and secure project continuity. The proposed loan structure includes an interest reserve, which will facilitate immediate renovations and significantly increase the property's value, thereby streamlining the refinance process.

Risk: Capital Deployment Efficiency: Ensuring that capital is deployed efficiently and effectively across various project phases.

Mitigation: The project employs a phased development approach. This strategy ensures that capital is deployed incrementally and efficiently, with initial revenue streams established early to service the loan and provide ongoing operational funds.

Risk: Funding Shortfalls: Potential for shortfalls in meeting lender requirements or covering unexpected costs.

Mitigation: A portion of the initial loan is specifically allocated for immediate renovation. Furthermore, the borrowers are actively pursuing interest reserves and external support mechanisms to meet lender requirements and cover any potential shortfalls, ensuring financial stability throughout the development.

12.3. Regulatory Risks

Risk: Permitting Delays: Potential delays in obtaining necessary permits for construction and development, which can impact timelines and budgets.

Mitigation: A clear and expedited permitting pathway has been established for the first three key structures. The necessary documentation is ready for submission, and approval is anticipated within 10 days, significantly minimizing potential delays.

Risk: Zoning Compliance: Ensuring that all development plans strictly adhere to local zoning regulations.

Mitigation: The project's comprehensive blend of residential, agricultural, and community uses is meticulously aligned with Upper Ojai's distinct zoning regulations. This alignment is a fundamental aspect of the project's design, ensuring long-term viability and regulatory compliance.

12.4. Market Risks

Risk: Demand Fluctuations: Changes in market demand for wellness retreats, eco-tourism, or specific agricultural products.

Mitigation: The eco-village is designed with a highly diversified revenue model, encompassing lodging, events, agricultural products, and educational programs. This broad approach significantly reduces reliance on any single income stream. Furthermore, there is strong and growing market demand in Upper Ojai for properties offering privacy,

natural beauty, and unique amenities, particularly within the wellness and eco-tourism sectors.

Risk: Competition: The emergence of new competitors in the eco-tourism or retreat market.

Mitigation: The Sulphur Mountain Eco-Village offers a unique and compelling value proposition. Its distinct blend of regenerative agriculture, sacred spaces, and innovative financial models (such as the tokenized system) provides a significant competitive advantage. Continuous innovation in programming and strong community engagement will further foster loyalty and differentiate the eco-village in the market.

12.5. Operational Risks

Risk: Operational Continuity: Challenges in maintaining smooth, day-to-day operations across diverse project components.

Mitigation: A dedicated cluster of 5-7 small-footprint homes is established for the core operational team. Their on-site presence ensures consistent support and smooth daily operations, significantly reducing the need for external outsourcing and enhancing overall project resilience.

Risk: Infrastructure Challenges: Potential issues with the reliability or capacity of essential utilities, including water, electricity, roads, septic, and propane systems.

Mitigation: Comprehensive upgrade plans are in place for all utilities. These include enhancements to the well system, installation of off-grid solar grid systems, resurfacing and expansion of internal roads, and the implementation of expanded septic and greywater systems. These proactive measures ensure robust and sustainable infrastructure.

Risk: Agricultural Risks: Risks associated with agricultural ventures, such as crop failure, livestock disease, or market price volatility for produce.

Mitigation: The agricultural strategy is highly diversified, encompassing food forests, various fruit trees, and a range of livestock. This diversity reduces dependence on any single crop or animal. Furthermore, integration with educational programs and direct-to-consumer sales channels provides stable outlets for produce, mitigating market price fluctuations.

12.6. Partner-Specific Risks

Risk: Partner Conflict: Historical issues with a 60% partner undermining previous appraisals and refinancing opportunities.

Mitigation: A primary purpose of the current loan is to facilitate a partner buyout, securing 100% ownership for LightBody Love Inc. This action will eliminate the source of past conflicts and ensure unified decision-making and project continuity.

12.7. General Risks

Risk: Natural Disasters: Risks common to the region, such as wildfires or droughts.

Mitigation: While not exhaustively detailed in the provided documents, a comprehensive plan for such risks would typically include robust insurance coverage, the use of fire-resistant building materials where appropriate, and the implementation of advanced water conservation strategies. (Further detailed planning and specific measures in this area would be a subsequent step).

Risk: Economic Downturns: Broader economic factors that could negatively impact investment and consumer spending.

Mitigation: The project's focus on essential needs (food, sustainable housing) and experiential offerings (wellness, education) provides a degree of resilience against economic fluctuations. Additionally, the innovative tokenized system may offer alternative funding mechanisms that are less reliant on traditional financial markets, providing a buffer during economic downturns.

13. Conclusion and Call to Action

The Sulphur Mountain Eco-Village represents a rare and extraordinary opportunity to invest in a project that is not only financially sound but also deeply aligned with the growing global demand for sustainable, conscious living. This comprehensive plan details a meticulously designed, multi-phased development that harmonizes regenerative agriculture, innovative lodging, sacred community spaces, and robust financial planning. With a clear path to a projected After-Repair Value of over **\$6.9 million**, a diverse and resilient revenue model, and a seasoned leadership team, the project is poised for exceptional success.

We have laid the groundwork for a landmark destination in one of California's most coveted locations. The strategic acquisition of a **\$1.65 million bridge loan** will be the catalyst that unlocks the full potential of this 9.47-acre sanctuary, resolving immediate financial pressures and launching the first critical phase of development. The phased approach ensures that risk is managed, capital is deployed efficiently, and revenue streams are activated progressively, creating a self-sustaining ecosystem of growth and profitability.

This is more than an investment in real estate; it is an investment in a new paradigm of living—one that integrates ecological stewardship, community well-being, and spiritual enrichment. It is a chance to be at the forefront of the regenerative movement and to co-create a legacy project with lasting positive impact.

We extend a heartfelt invitation to aligned partners, investors, and collaborators to join us in this transformative endeavor. Whether through direct capital investment, creative

contribution, or hands-on participation, your involvement will be instrumental in bringing this vision to life. We are actively seeking partners who share our commitment to building a thriving, regenerative community and who recognize the immense potential of this unique, land-based project.

Let us build the future, together. We encourage you to reach out to discuss how your vision and resources can align with ours to co-create a prosperous and sustainable future at the Sulphur Mountain Eco-Village.
